M2003

TECHNICAL DESCRIPTION

M2003

The dimensions are: Width 440 mm, Depth 450 mm, Height of the backseat 350 mm.

Omsi's Model M2003 is a Stadium seat with backrest which grants the user to enjoy the sport event in the maximum comfort without sacrificing strength and durability.

The M2003 is Omsi's best seller seat with 450 mm depth. Its 3 fixing points grant exceptional strength, reliability and resistance to vandalism

UEFA recommendations and FIBA approved, complying with the European standards UNI EN 13200-1-4; tested by appropriate national and certified labs, specialized with wood and furniture.

M2003 also complies with European standards UNI EN 12727:2017 (level 4 – severe).

Injection moulded with first quality coloured copolymer polypropylene, fire resistant reaction class 1, also addicted with Anti-UV treatment (standard or long range) to ensure maximum resistance to UV insulation rate.

The base perimeter of the shell has a thickness of 3/4 mm, increased compared to the average thickness, so that the whole load is evenly distributed; a grid of 2.5 / 3 mm thick ribs crossing under the seat, connect

the fastening points' slots.

An edge by 4/5 mm thick along the perimeter of the backrest strenghtens the most stressed part; 10 horizontal ribs (5 per side) of thickness 2 mm ensure excellent resistance to impacts from the back. The surface of the seat is shiny and smooth to prevent dirt accumulation and facilitate cleaning.

The drainage of the liquids occurs by gravity by means of an integrated hole in the seat design that drives the liquids in the rear avoiding any kind of stagnation in the central part of the shell. Curved front edge with right-angle base overlapping terrace front

Seat numbers, 45x18 mm are made with plastic material (or aluminium) and are located in the appropriate slot in the front part of the seat for easier viewing from below by climbing the steps. The plate is fixed using n.2 rivets 3,2x7 mm.

Installation options:

1. Direct on concrete step in 3 points with M8/M10 anchors;
2. Riser mounted on a polyamide or metal bracket in 3 points using M8/M10 anchors;
3. Floor mounted on metal beam fixed to the step floor in 3 points with M8 anchors;

FIFA Recommended 500 mm

> DIRECTLY ON STEP

> RISER MOUNTING*

> ON METAL BENCH
