TECHNICAL DESCRIPTION

M2004

The OMSI seat Mod. M2004 / SEST is a seat without backrest that allows the user to enjoy the sporting event in comfort, without sacrificing strength and durability.

It complies with European standards UNI EN 13200-1-4 and it is certified with laboratory tests by the largest Italian research and testing institute furniture sector according to the European standard UNI EN 12727: 2017 (level 4 - severe).

Injected with first choice colored polypropylene copolymer fire retardant class 1 of reaction to fire (Italian std) and activated in the mass with substance resistant to UV rays (standard or long-lasting protection)

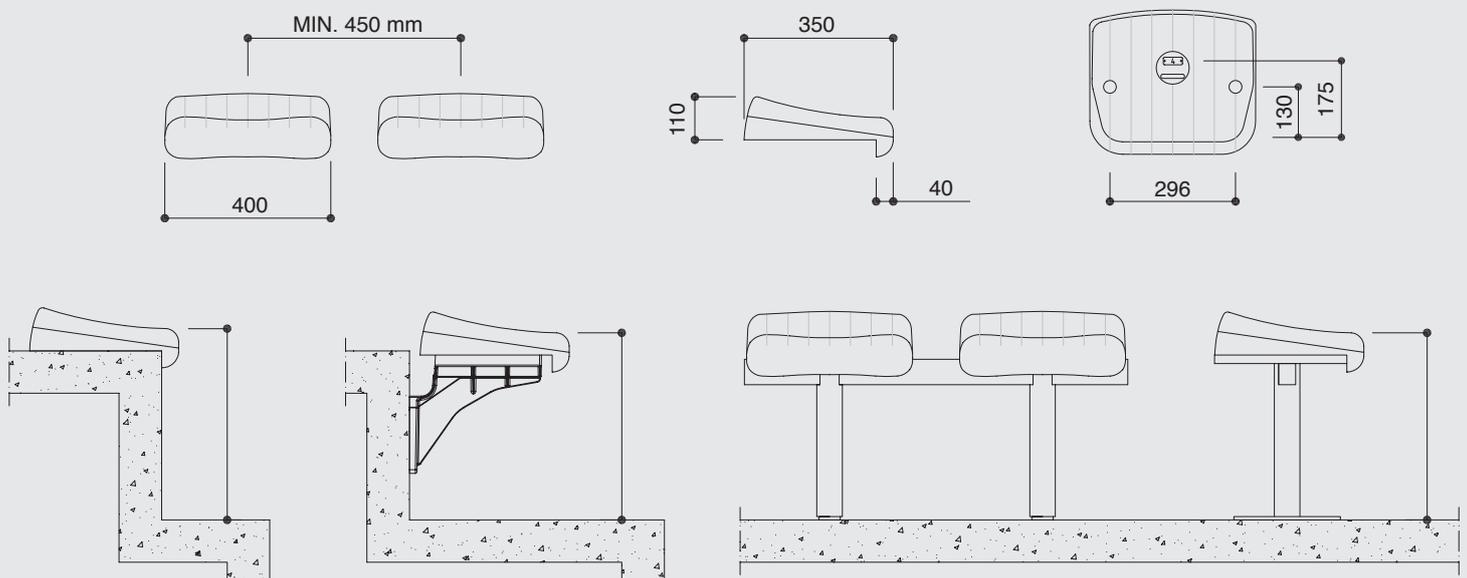

The bucket seat is composed of a solid base with longitudinal reinforcement ribs and thickenings near the fixing points. The surface of the seat is smooth and shiny to facilitate cleaning. The outflow of liquids is provided in the central part and avoids water stagnation. The entire perimeter of the seat rests on the floor avoiding any accumulations of dirt. Closure and protection of the fixing anchors by means of fixed interlocking caps of the same color as the seat.

The 45x18 mm plastic (or aluminum) numbered plate is located in the appropriate housing on the central fixing cover cap. All fixed by means of n. 2 blind rivets 3.2x7 to maintain the anti-vandal characteristics.

The real heart of the seat is the "Central fixing system": it is a die-forged electro-galvanized metal plate with a size of 54x35, 3 mm thick, which, when fixed together with the seat, increases the tear resistance by 60% compared to a standard washer. It should be noted that its size is bigger than 3 washers with a diameter of 24 mm.

INSTALLATION POSSIBILITIES:

1. directly on the step in 3 points by means of M8 / M10 expansion anchors or concrete screws;
2. on a polyamide (or metal) bracket in 3 points by self-tapping screws; Both are then fixed on the step riser in 3 points by means of M8 / M10 expansion bolts;
3. On metal beam in 3 points by self-tapping screws; seat on beam is then fixed to the floor in 4 points by means of expansion bolts M8 / M10.

*Possibility to choose between polyamide or metal bracket

GRAND STADE MOHAMMED V - CASABLANCA, MOROCCO

NATIONAL STADIUM OF PERU - LIMA, PERU
